Making Zoo file transfers easy
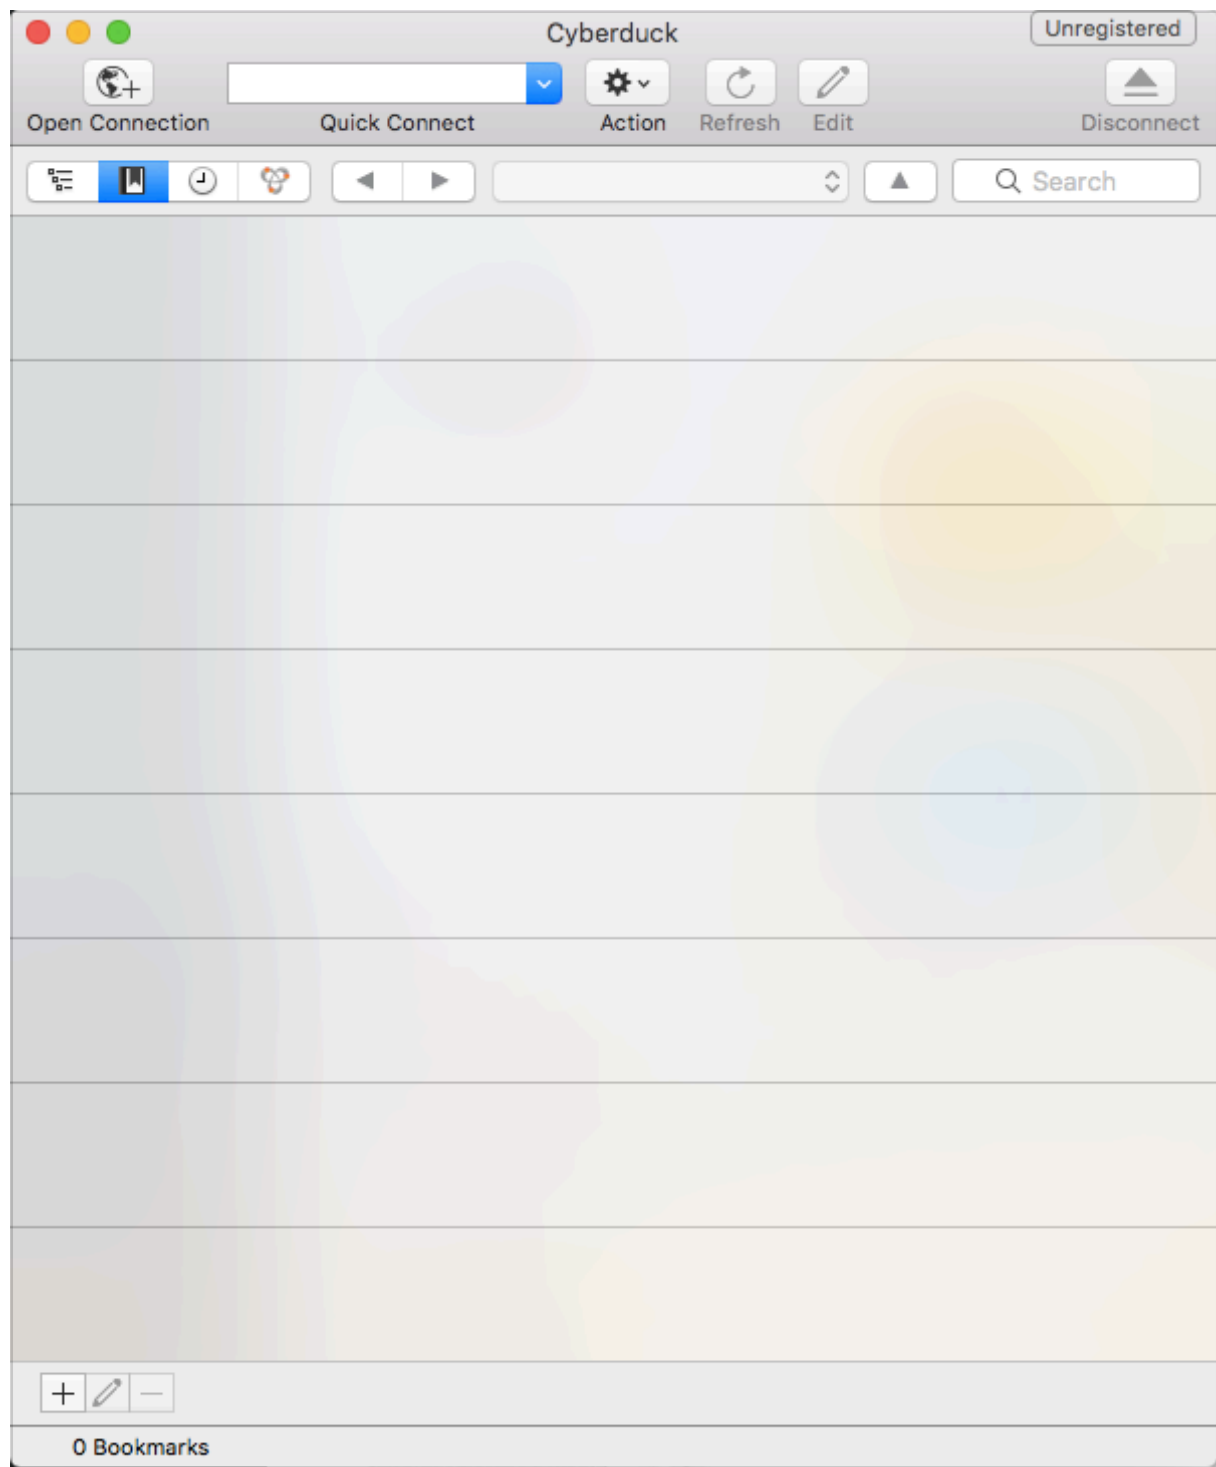

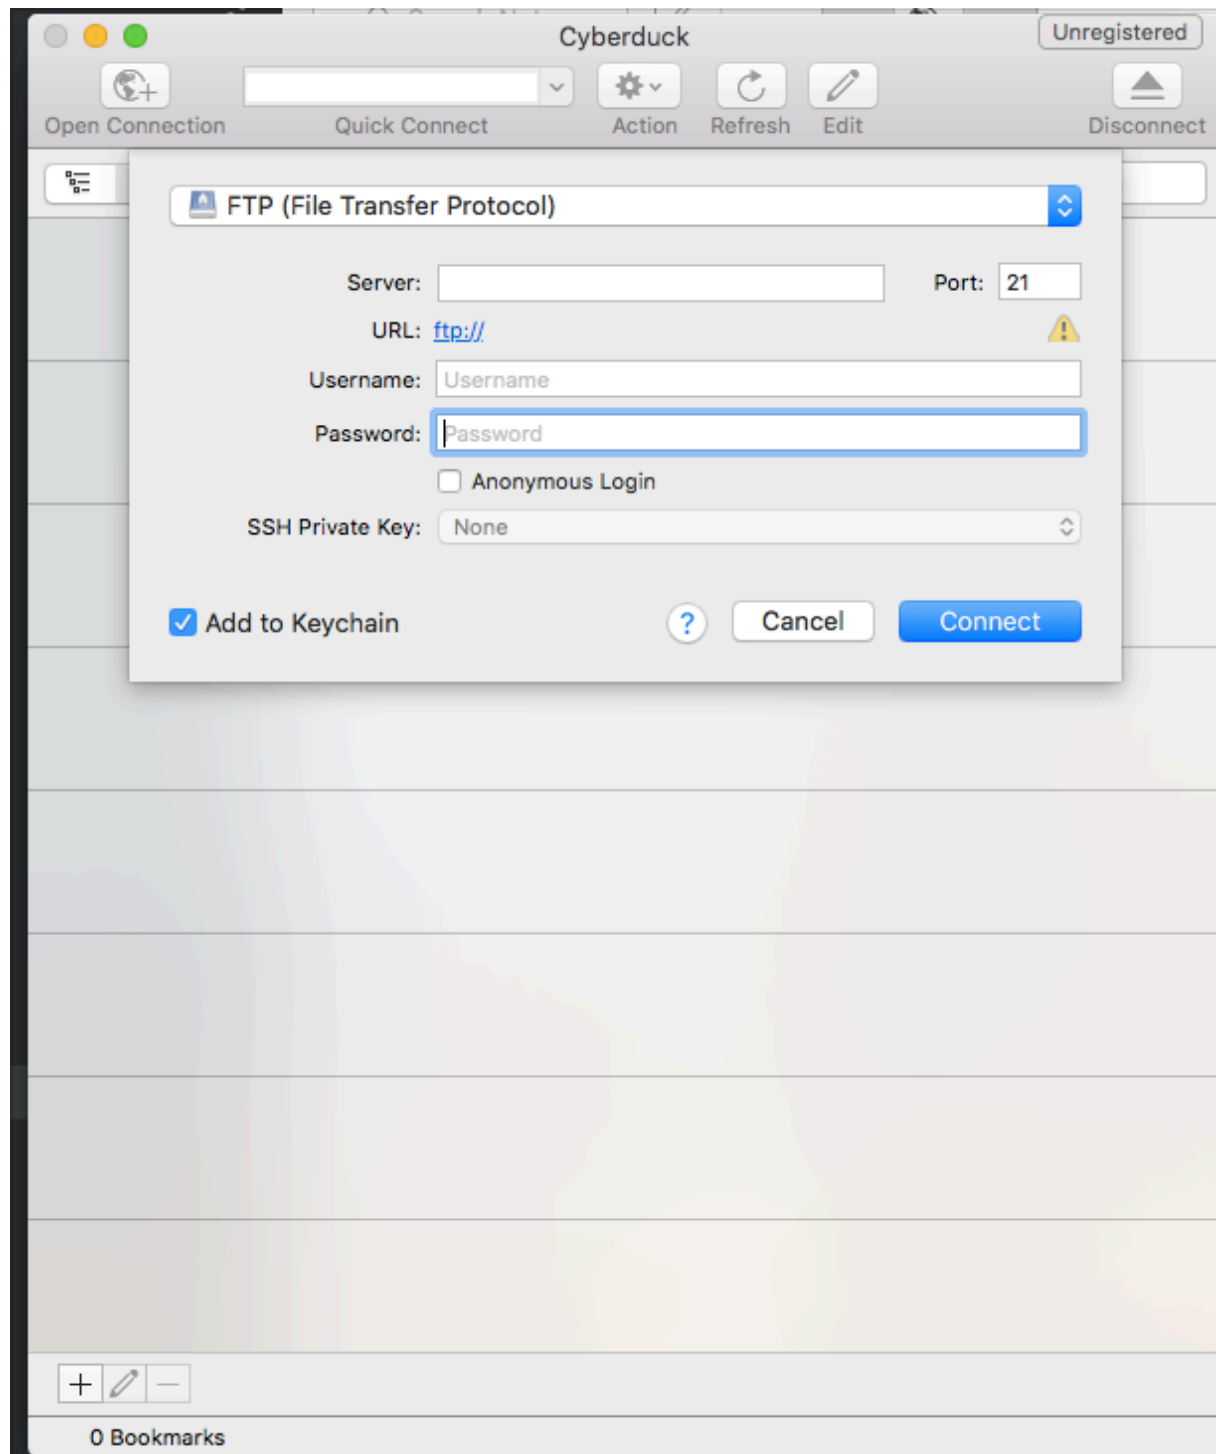

1. Download Cyberduck from Cyberduck | Libre FTP, SFTP, WebDAV, S3, Backblaze B2 & OpenStack Swift browser for Mac and Windows

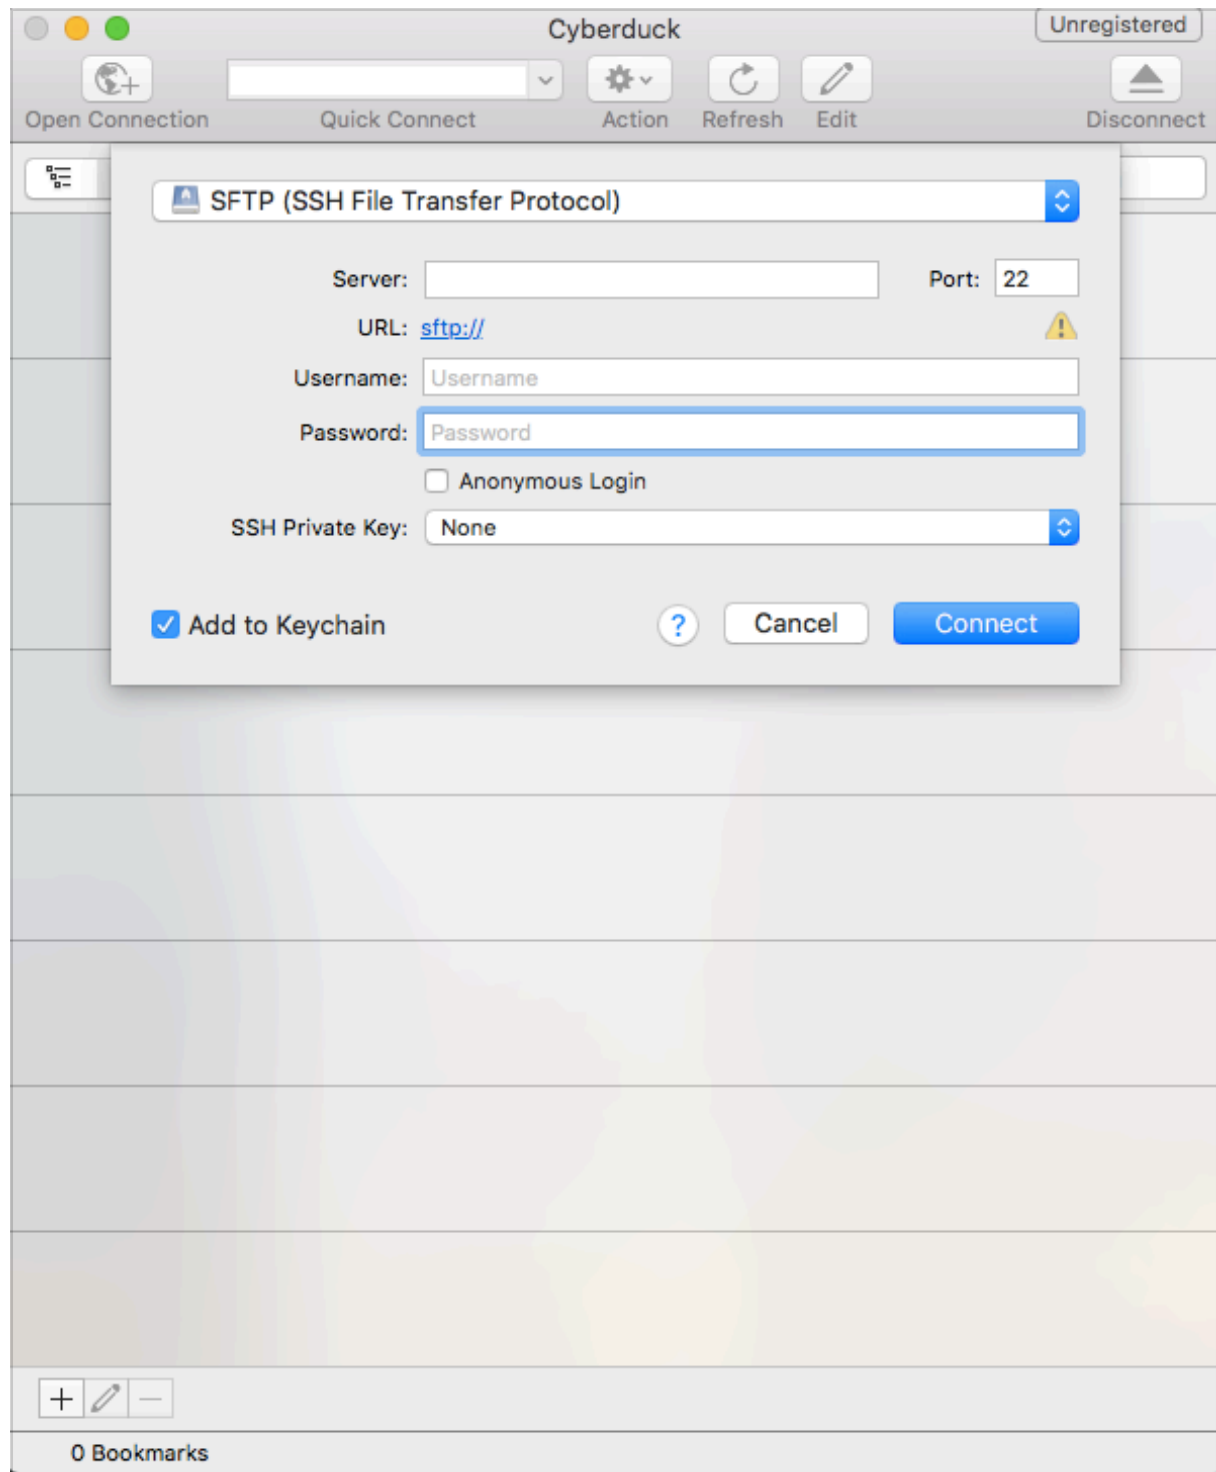

2. Open Cyberduck and you should see an empty browser
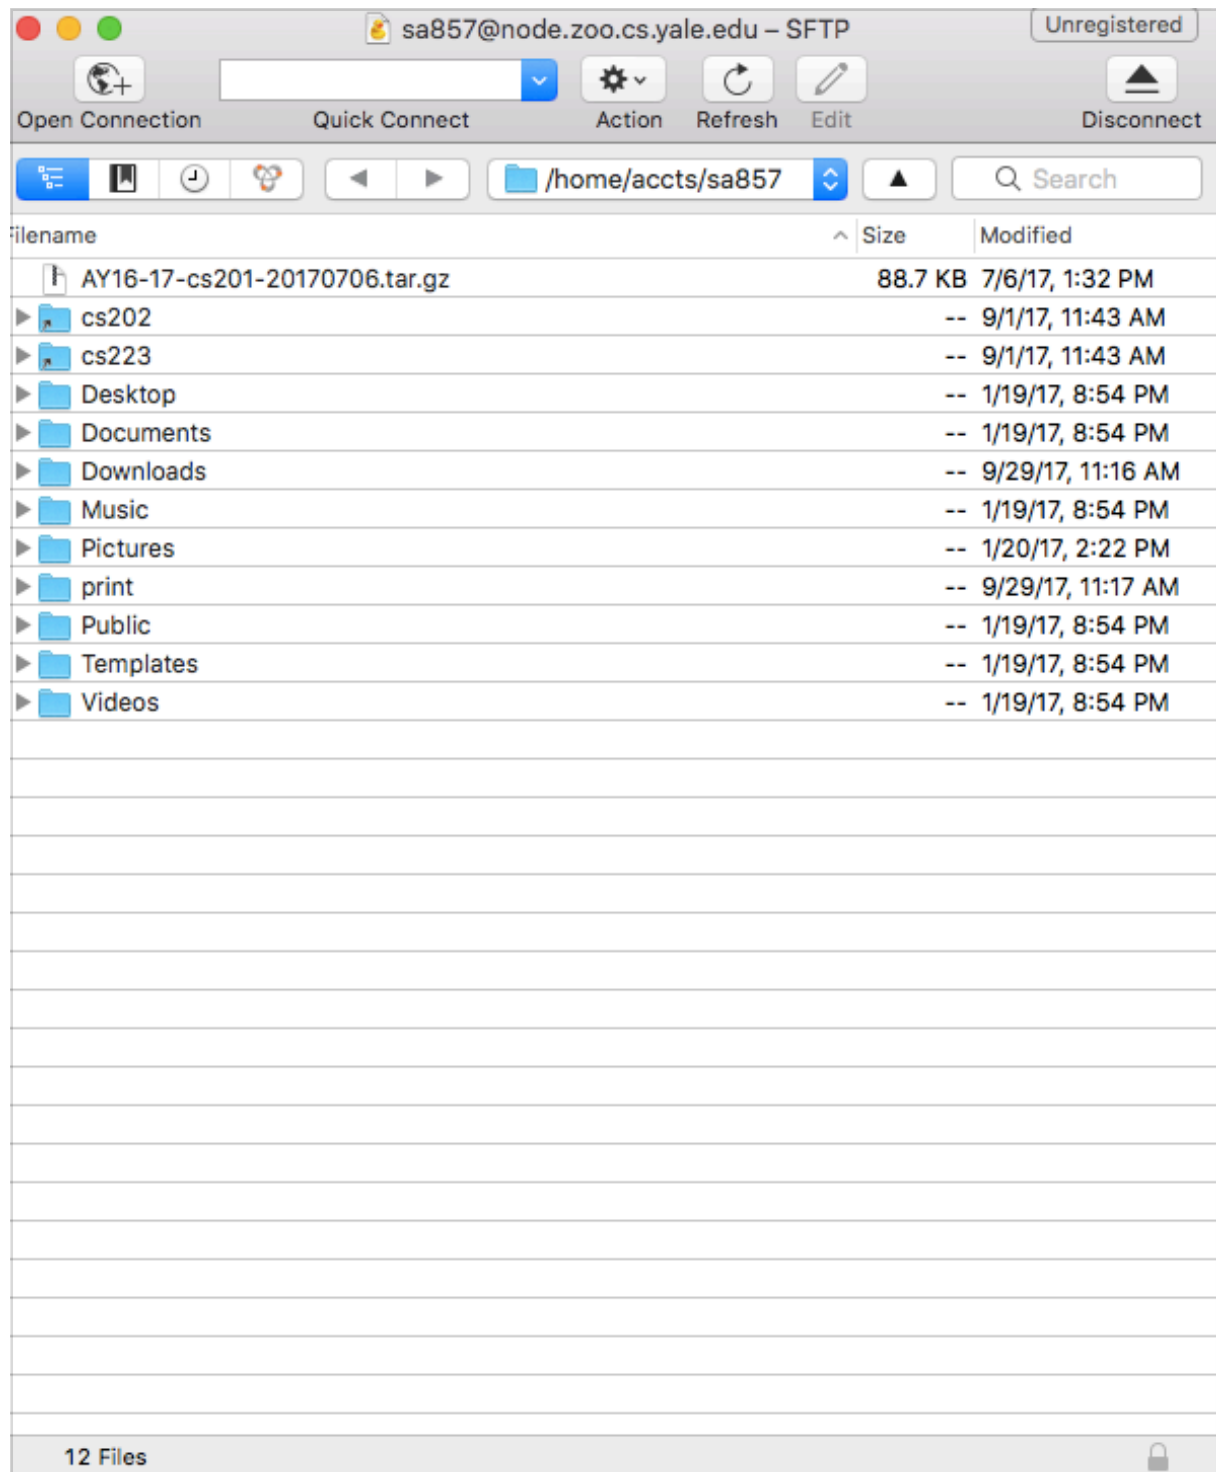

3. Click Open Connection to get this:

4. Using the dropdown, switch to SFTP

5. For the server, type in node.zoo.cs.yale.edu, for the username, type in your NETID, for the password, type in your NETID password. Keep anonymous login UNCHECKED. Keep SSH Private Key as None. Tick Add to Keychain if you want your NETID password to autocomplete the next time you open this connection

6. Now you should see all your files. You can drag and drop between this browser and your computer to transfer files

7. Remember, that this only transfers files to the Zoo. It won't submit them!!!!!!!!!!!!!!!
